

Cooling Gymnasium Facilities Virgin Active, Barangaroo, NSW.

Virgin Active is a new high-class gymnasium chain and their flagship facility is located in the new Barangaroo development located on the Sydney CBD foreshore. In order to save energy and air conditioning ductwork and provide a cooling solution that offered minimum impact on the activities, David Shreve, Virgin Active's consulting mechanical engineer from DSA and Associates, approached Airius about installing some of their unique and architecturally aesthetic R20 EC 'Eyeball' fans, to provide cooling around the space, space, while also minimising Air Conditioning ductwork.

CASE STUDY 2019

Virgin Gyms are opening new facilities across Australia and Asia and they are keen to provide an energy efficient and unobtrusive cooling solution for the users of their gymnasiums and exercise centres.

Their flagship facility is located at Barangaroo, by the Sydney waterfront, and provides a range of exercise opportunities including cycling, yoga, boxing, weight rooms, and numerous other exercise configurations.

David Shreeve from DSA and Associates, director and mechanical engineer and long a supporter of the Airius products, recommended the use of the fans to Virgin Active as a methodology to reduce air conditioning ductwork and running costs, while at the same time providing an unobtrusive solution. Typical ceiling fans weren't suitable due to low ceiling heights and their distraction and interruption to activities, while they also were limited in their mounting locations.

Primarily though, the Airius fans offered an unmatched ability to move the conditioned air around the space and over distance that no ceiling fan can match.

The Airius solution offers both ceiling and roof mounted options and the request from Virgin for the fans to be black was easily fulfilled by Airius. Virgin Active and DSA are so thrilled by the results that they have

Airius installed: -

- 21 x Airius R20 EC 'Eyeball' fans in black
- 2 x Airius M25 EC Short Air Pear fans in black
- 2 x Airius ceiling kits in black

subsequently installed the Airius fans into two more Virgin Active facilities; Market St. and Bridge St. in the Sydney CBD.

Their unique look, small size, large amount of air movement, full BMS control capability and very low 30 watt power consumption has worked in perfectly with the Virgin Active design brief.
