

CASE STUDY

STARWARD DISTILLERY

MELBOURNE, VIC

INTRODUCTION

New World Whisky Distillery is the home of award-winning STARWARD and one of the leading producers of Australian whisky. For nearly two decades, the team have pioneered a new way of crafting and experiencing whisky, using local ingredients and maturing their product in barrels from renowned Australian wine regions to create a distinctly Australian spirit.

The distillery, blending, packaging line and bar are all under one roof, and things can get a bit warm and sweaty in the heat of Melbourne summer!

The fans work well and have been very well-received by the team here.

LOC MCINTYRE

New World Whisky Distillery

THE CHALLENGE

With the distillery, blending space, packaging line and in-house bar all housed in the one facility, New World needed a way to improve airflow across multiple areas of their business.

Following the successful installation of three G400s in the main tasting area of their bar, the team contacted Airius for an additional spot cooling solution to improve thermal comfort in production and retail areas.

THE SOLUTION

A series of Onyx EC fans were installed in the control station for the distillery, the packaging line and the in-house bar, enabling New World to increase air movement and improve thermal comfort for their staff and patrons.

Product: Onyx Series

Use Case: Spot Cooling

Range: Heights of 4-12 metres
